

### X-RING

X-Ring has a cross-section with 4 lobes offering a double sealing line. Just like for O-Rings, there is no direction of assembly.

It is particularly suitable for dynamic applications such as:

- alternating movements;
- rotating movements

X-Ring offer a better solution to ensure tightness of hydraulic, pneumatic and oleopneumatic devices

• Products Family: **O-Rings** 

## **TECHNICAL FEATURES**

- Available in many standard rubber materials.
- Shapes designed according to customers requirements.

### **BENEFITS**

Safety

- Easy Assembly
- Durability

## **MARKET AND EXPERTISE**

**INDUSTRY** 

**Precision Sealing Systems** 

# **ALL PRODUCTS FAMILIES**

# All Products Families for Industry Precision Sealing Systems

#### **O-RINGS**

Our O-Rings ensure perfect static and dynamic seals between two parts assembled radially (shafts) or axially (covers). They can withstand the most extreme temperatures and fit in the smallest spaces.

### **Shaft Seals**

They ensure the perfect sealing on rotating, or translating shafts under a large range of temperature. Our Dynamic Seals maintain lubricants in engines and transmissions while avoiding any foreign particles or fluid pollution.

## **Magnet rings**

Thanks to the magnet pattern printed in an elastomeric or plastic compound, our Encoders can accurately provide position, direction and speed of a rotating shaft. You find it operating in engines, transmissions and ABS systems.

## **Precision Static Seals**

Braking, fuel, oil, air, water systems are operational if they do not leak. Their reliability results from our Precision Static Seals, made of approved materials, tailor made designs and mastered processes.
