

#### **FLEXONIC®**

Our high-performance FleXonic® belt is fitted with an elastic polyamide cord. We use a molding process to guarantee the highest quality. They can be installed on systems with a fixed center-to-center distance, making any type of transmission layout feasible, such as serpentine belt assemblies or receivers engaged by the back surface, providing constant tension.

• Products Family: Belts

## **TECHNICAL FEATURES**

- Longitudinal grooves.
- Compatible with 0.1 to 100 kW transmission.
- Four different models available: PH, PJ, PK and PL.

## **BENEFITS**

- Lightweight
- Comfort
- Cost-Effective
- Reliability

## MARKET AND EXPERTISE

**Belt Drive Systems** 

## **ALL PRODUCTS FAMILIES**

# **All Products Families for Industry Belt Drive Systems**

#### **Belts**

Our belts transmit power from the motor to all power transmission receivers. They resist both high and low temperatures, dynamic loads and abrasions. They also offer an outstanding acoustic performance.

## **Hydraulic Belt Tensioners**

Our Hydraulic Belt Tensioners reduce vibrations in power transmission systems. They also extend transmission lifespans by optimizing belt tension. They're particularly well suited for components with a high dynamic behavior.

## On/Off Idlers

They guarantee the position and automatic tension once the FleXonic® belt has been installed for complex multi-shaft systems. Enable a quick assembly adapted to the FleXonic® belt tension even in the most complex cases.
